

Biostimulant Soil Drench

Just Add Water

Instructions:

- Use 1 Gallon clean, lukewarm water per 250 square feet
- Dissolve Molasses in warm water before adding to recipe

Measure:

(Use Once a Month)

- 4 Teaspoons Organic Molasses
- 4 Teaspoons Effective Microorganisms
- 1/4 Cup Sea Minerals
- 1 Teaspoons Liquid Kelp
- 1/2 Teaspoon Humic Acid
- Mix together & allow to sit for 3 hours
- Apply at a rate of 1 cup per 16 square feet; dilute mixture in a garden sprayer or watering can for even distribution

Mixing EM-1

(Use Once a Week)

- 4 Teaspoons EM-1 and 4 Teaspoons Organic Molasses to 1 Gallon water
- Mix together & allow to sit for 3 hours

-Covers 250 square feet

Tips

- Wet the measuring cup before measuring molasses, use warm water with which helps to clean out the measuring cup and makes it easier to dissolve the molasses.
- Set the sprayer nozzle tip to a heavy-flow setting. (This mixture should not be applied as a fine mist.)
- Make sure to immediately rinse sprayer bottle with water, then partially fill and spray clean water through nozzle to avoid clogging.
- Optional: use an aerator pump during brewing to supply more oxygen to the aerobic (oxygen loving) bacteria.
